South Asia		0,548	65,9	4,6	9,8	3 435	—	0,569
Sub-Saharan Africa		0,463	54,4	4,5	9,2	1 966	—	0,467
Least developed countries		0,439	59,1	3,7	8,3	1 327	—	0,467
Small island developing states		0,640	69,6	7,3	10,8	5 200	—	0,675
World		0,682	69,8	7,4	11,3	10 082	—	0,683

DEFINITIONS

Human Development Index (HDI): A composite index measuring average achievement in three basic dimensions of human development—a long and healthy life, knowledge and a decent standard of living. See *Technical note 1* for details on how the HDI is calculated

Life expectancy at birth: Number of years a newborn infant could expect to live if prevailing patterns of age-specific mortality rates at the time of birth stay the same throughout the infant's life.

Mean years of schooling: Average number of years of education received by people ages 25 and older, converted from education attainment levels using official durations of each level.

Expected years of schooling: Number of years of schooling that a child of school entrance age can expect to receive if prevailing patterns of age-specific enrolment rates persist throughout the child's life.

Gross national income (GNI) per capita: Aggregate income of an economy generated by its production and its ownership of factors of production, less the incomes paid for the use of factors of production owned by the rest of the world, converted to international prices

GNI per capita rank minus HDI rank: Difference in rankings by GNI per capita and by the HDI. A negative value means that the country is better ranked by GNI than by the HDI.

Nonincome HDI: Value of the HDI computed from the life expectancy and education indicators only.
